

## International Green Roof Association Global Networking for Green Roofs

### Project Data

Project:	Mesa Hospital
Client:	-
Location (City, Country):	Ankara, Turkey
Year of Construction:	2004
Roof Size:	1,000 sqm
Building Type:	Hospital
Green Roof Type:	Intensive
Vegetation:	Flowers, grasses, shrubs and trees
Architect/Designer:	Anshen & Allen, San Francisco, CA, USA
Contractor:	Onduline Avrasya A. S.

### “Mesa Hospital”

The 25,000 sqm, five-storey hospital building was designed by a San Francisco-based company, Anshen & Allen. The design won the best hospital design award in 1999, from the American Institute of Architects and Modern Healthcare Journal. It was the first hospital design of its kind in Turkey, thus making the hospital an especially unique project.

The site for this greenfield hospital is in the Sogutozu neighborhood in central Ankara close to a shopping center and public parks. The hospital building will have five levels, including two underground floors for parking, utility rooms and support services, and three floors for most medical and surgical services and inpatient beds.

A 1,000 sqm intensive green roof was established on top of the underground garage. The design of the green roof includes different flower beds, walkways and benches. The green roof area is accessible for patients and thus allows for a healing atmosphere.
